

Smart Pass useful for "Stop & Go"

The Smart Pass do come in handy

I was introduced to this unique gadget by Aaron Sitai, the owner of GadgetPlus Store (GPS) and he showed me a quick demo on how convenient a Smart Pass can do for car owners.

Let's give this scenario. I drive down to "kedai runcit" and I normally buy my goodies or newspaper and it's just a 30 second pitstop. We have the tendency not to turn off the engine and just leave it on and take for granted that Brunei is a safe place. Well, you will be surprised. It happened to my friend and in a matter of seconds, he lost his valuables in the passenger seat.

So now, with Smart Pass, you can safely lock your car with your engine still running by tapping the Smart Pass on the censor of the device (Smart Pass RF Reader). Now these are pretty ideal especially those who fall in this category and also companies that does a lot of delivery services to their clients. Of course, it's still convenient for the usual drivers like us too.

Not to worry, peeps, as it won't harm your ECU as the fitting won't tamper with it. The best part is that if you have your existing central locking system, it is still compatible with Smart Pass.

The Smart Pass locks the car by just tapping it on the Smart Pass RF reader

You can even put the Smart Tag in your smart phone for convenience

Air Vita Neo product from Korea

Air Vita Neo can be plugged and you don't need to change the filter and it's washable

Awesome gadget this. I've been using this in my room

It's pretty compact and it does wonder for such a small air ionizer

I have this for my car

You can use cotton bud to clean and yes, no need to replace filter
